

Folder structure (on gDrive)

- Thesis
 - README.md
 - deliverables
 - scrna-seq
 - * README.md
 - * codes
 - * all h5ad files
 - * results
 - regular (master + pdgfra subsets): all plots, all degs
 - trajectory: scvelo, cellrank, combined modalities
 - spatial
 - * README.md
 - * codes
 - * all h5ad files
 - * results: sec_cells, pdgfra, tdtomato

How to navigate the folders

- All deliverables are in **deliverables/**. This contains SRI poster, my thesis final presentation slides, and my final thesis.
- All analyses relating to scRNA-seq are in **scrna-seq/**. It contains all codes I've written in one folder called **codes/**, all results together (with subfolders) in **results/**, and all intermediate and final h5ad files in **h5ad/**.
 - Read the **README.md** file within this folder for all explanations of codes, results, and various files. It also entailed the methods description.
- All analyses relating to visium/spatial transcriptomics are in **spatial**. It contains all codes I've written in one folder called **codes/**, all results together (with subfolders) in **results/**, and all intermediate and final h5ad files in **h5ad/**.
 - Read the **README.md** file within this folder for all explanations of codes, results, and various files. It also entailed the methods description.

Folder structure (on github)

- scrna-seq
 - codes: all codes for scrna-seq analysis
 - README.md: detailed info for all code files
- spatial
 - codes: all codes for spatial transcriptomics analysis
 - README.md: detailed info for all code files
- thesis_figures_cleanup.ipynb: misc file when I was prettifying the figures for thesis write-up.

Note: for all results, deliverables, and other files, go to gDrive. Github repo is just for all codes.
